Perform Peripheral Intravenous (IV) Cannulation

Perform Peripheral Intravenous (IV) Cannulation

Intravenous (IV) cannulation is a technique in which a cannula is placed inside a vein to provide venous access.

Venous access allows sampling of blood as well as administration of fluids, medications, parenteral nutrition, chemotherapy, and blood products. IV Cannulation is a foundation skill for a broad range of clinicians working in all areas of clinical health.

Peripheral intravenous (IV) cannulation is a foundation skill for a broad range of clinicians working in all areas of clinical health.

The Perform peripheral intravenous cannulation program has been designed to provide students with the required knowledge and skills to safely perform a peripheral intravenous (IV) cannulation in a clinical setting.

The program is evidence based and the techniques taught are designed to promote the best practice outcomes for patient care.

This program has been designed to provide the student with the opportunity to gain or consolidate knowledge and skills in two key areas.

Intravenous cannulation involves the insertion of a venous cannula into a vein.

Course Outcome

On completion of this unit participants should be able to:

- Assess the need for cannulation
- Perform a cannulation procedure using the appropriate cannula
- Discuss the considerations that influence the correct selection of IV cannula size and cannula insertion site
- Demonstrate the technique of peripheral intravenous cannula insertion, including securing the cannula insitu
- Manage the cannula until it is no longer required and removal of the cannula is to be safely performed
- Safely remove the cannula, trouble shoot problems, discuss and manage possible complications.

On successful completion of the Program, students will be issued with a Statement of Attainment for accredited unit HLTHPS009 Perform peripheral intravenous cannulation.

Perform Peripheral Intravenous (IV) Cannulation

The Perform Peripheral Intravenous (IV) Cannulation Program is designed to be delivered as an onsite program. Onsite delivery offers an advantage for organisations and work places wanting to schedule and book their own course.

Onsite courses can be contextualised to meet the specific clinical needs of a workplace including the demonstration of particular cannulation techniques to suit a particular client profile, the incorporation of local policies and procedures into the program delivery and even the use of designated products to support the transition of skills from classroom to clinical practice.

Program Title	<i>Perform peripheral intravenous cannulation</i>
Unit Code	<i>HLTHPS009</i>
Program Cost	\$325.00 Per Student
Minimum Onsite	<i>Minimum 12 Students</i>
Maximum Onsite	<i>A maximum of 14 Students per Program. Additional facilitators can be provided for larger groups.</i>
Program Duration	<i>4 Hours</i>
Assessment	<i>Assessment Portfolio + Observed Clinical Practice</i>
CPD Hours	<i>10 Hours</i>
Pre Requisites	<i>Registered or Enrolled Nurses, General Practitioners, Paramedics and ATSI Health Practitioners</i>
Terms and Conditions	Click HERE for full terms and conditions

The minimum cost for delivery is \$3900.00. A discount is available if you are able to provide venue hire for the event.
